AgriSense

Group 6

Iteration 3

Diego Aguilar 117122

Gonçalo Fonseca 118920

Marta Condeço 112903

Tiago Coelho 118745

Monitoring made simple.

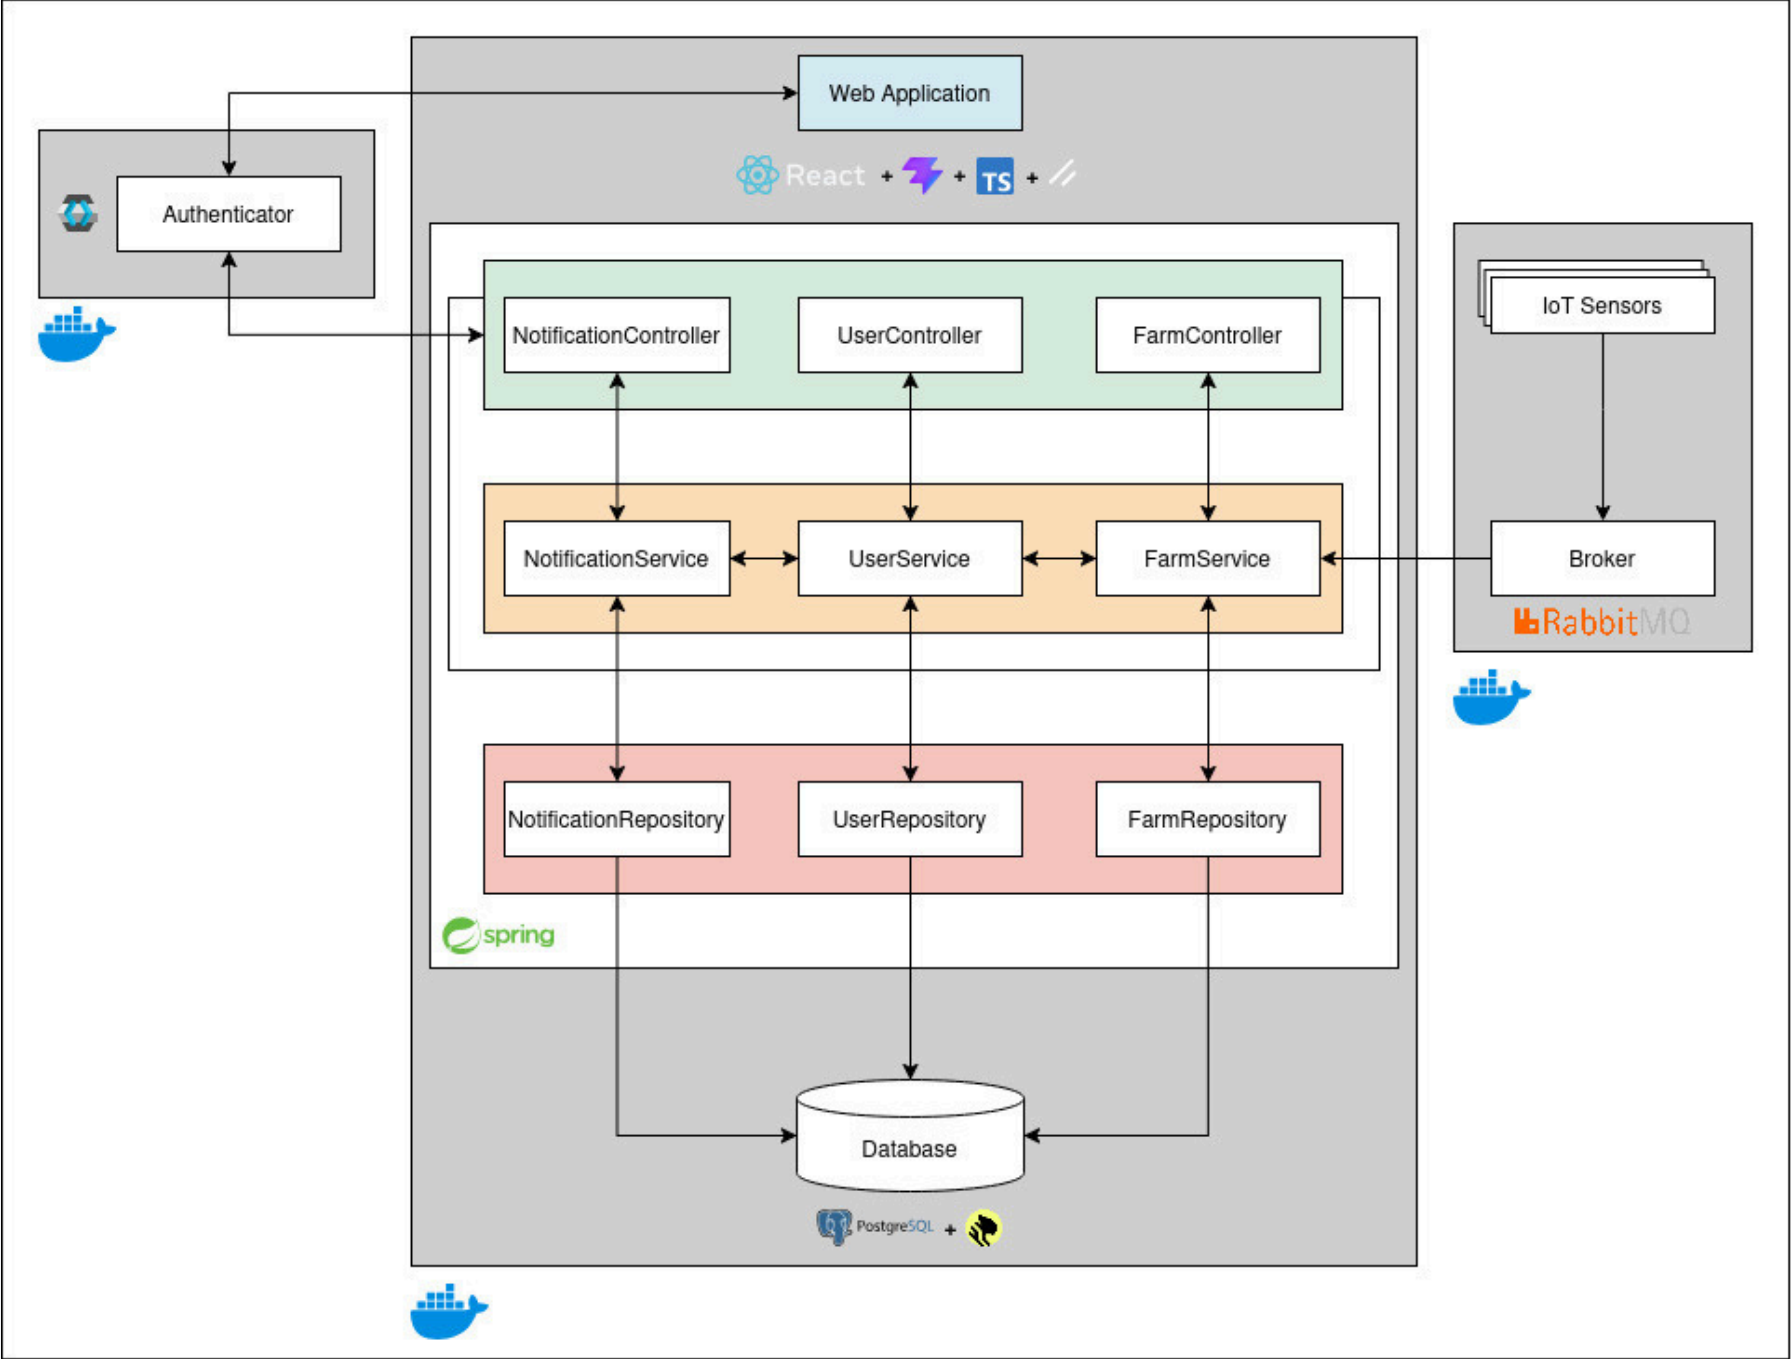

“A livestock **managing and monitoring platform** that processes body temperature, movement, and location sensor data to **detect health anomalies** in farm animals.”

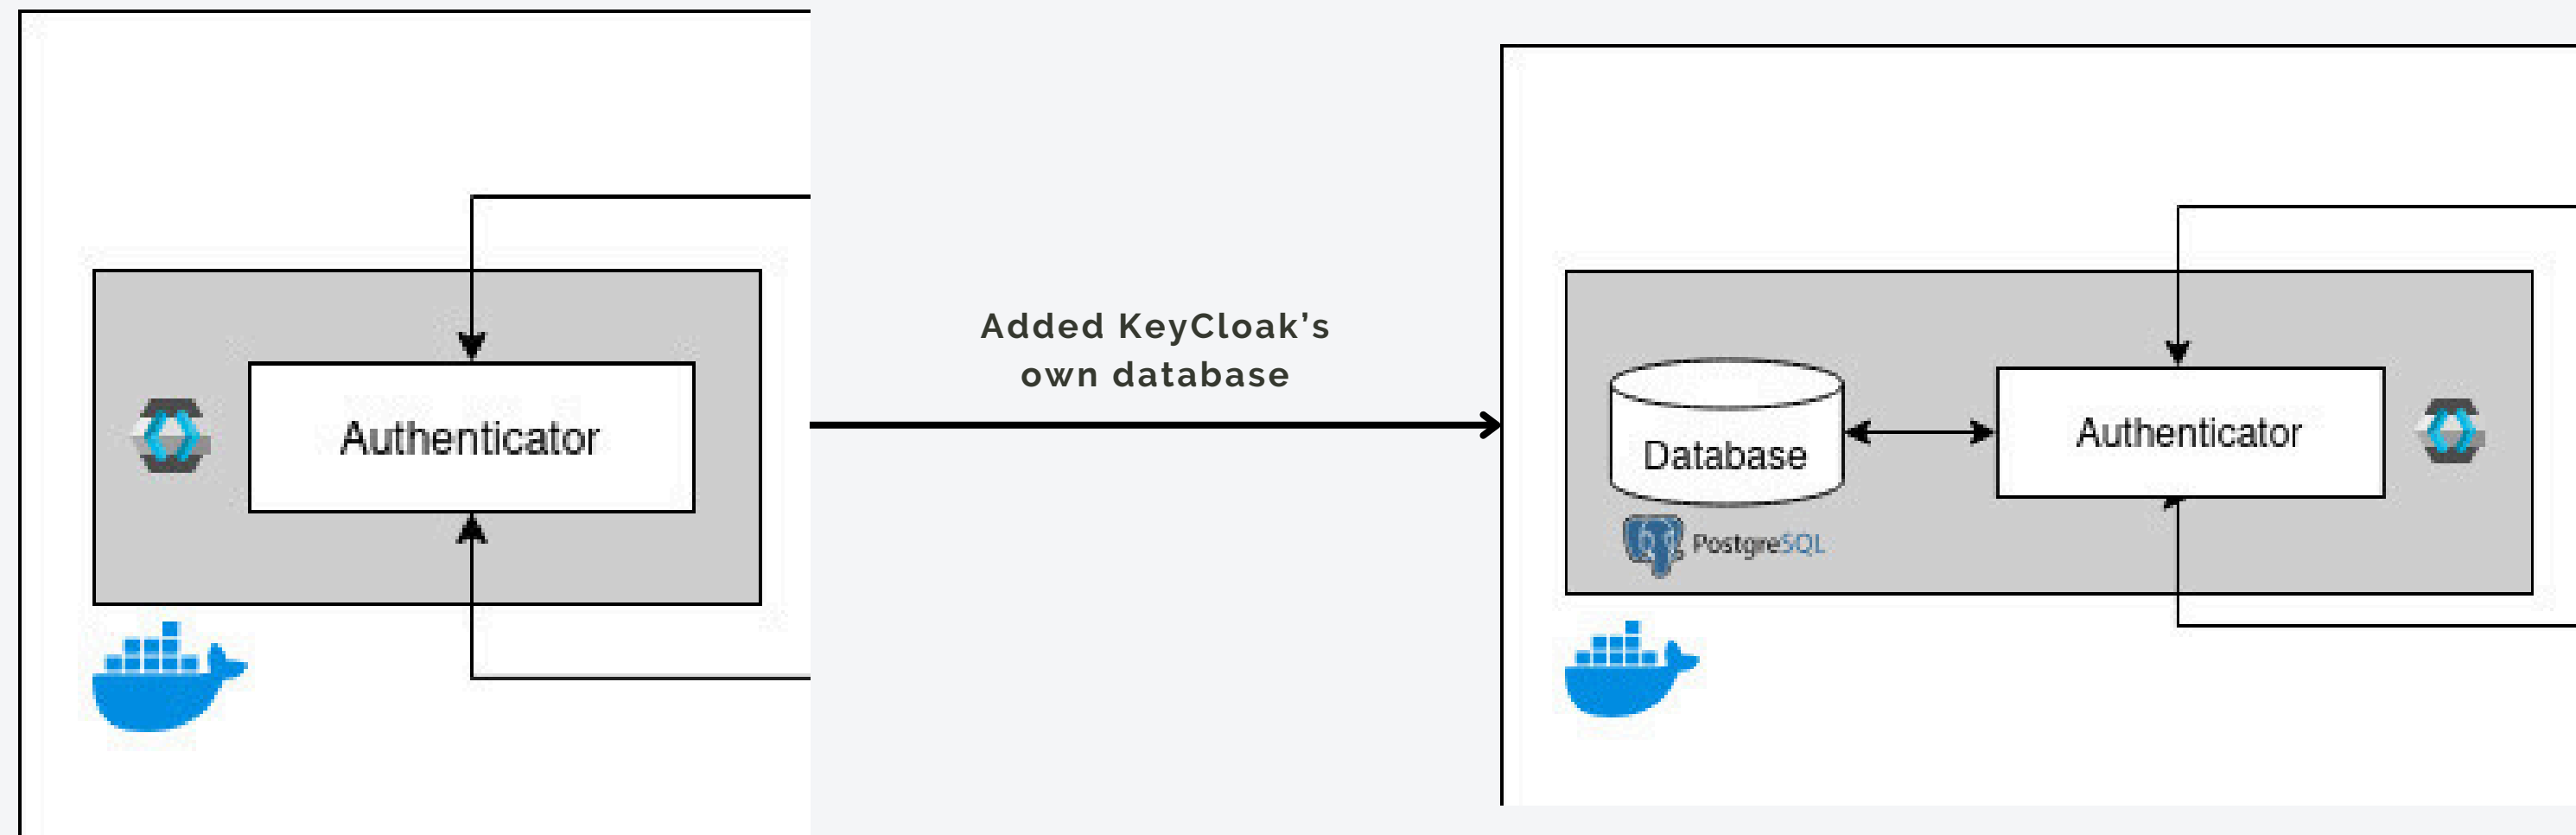

AgriSense

Architecture (Old)

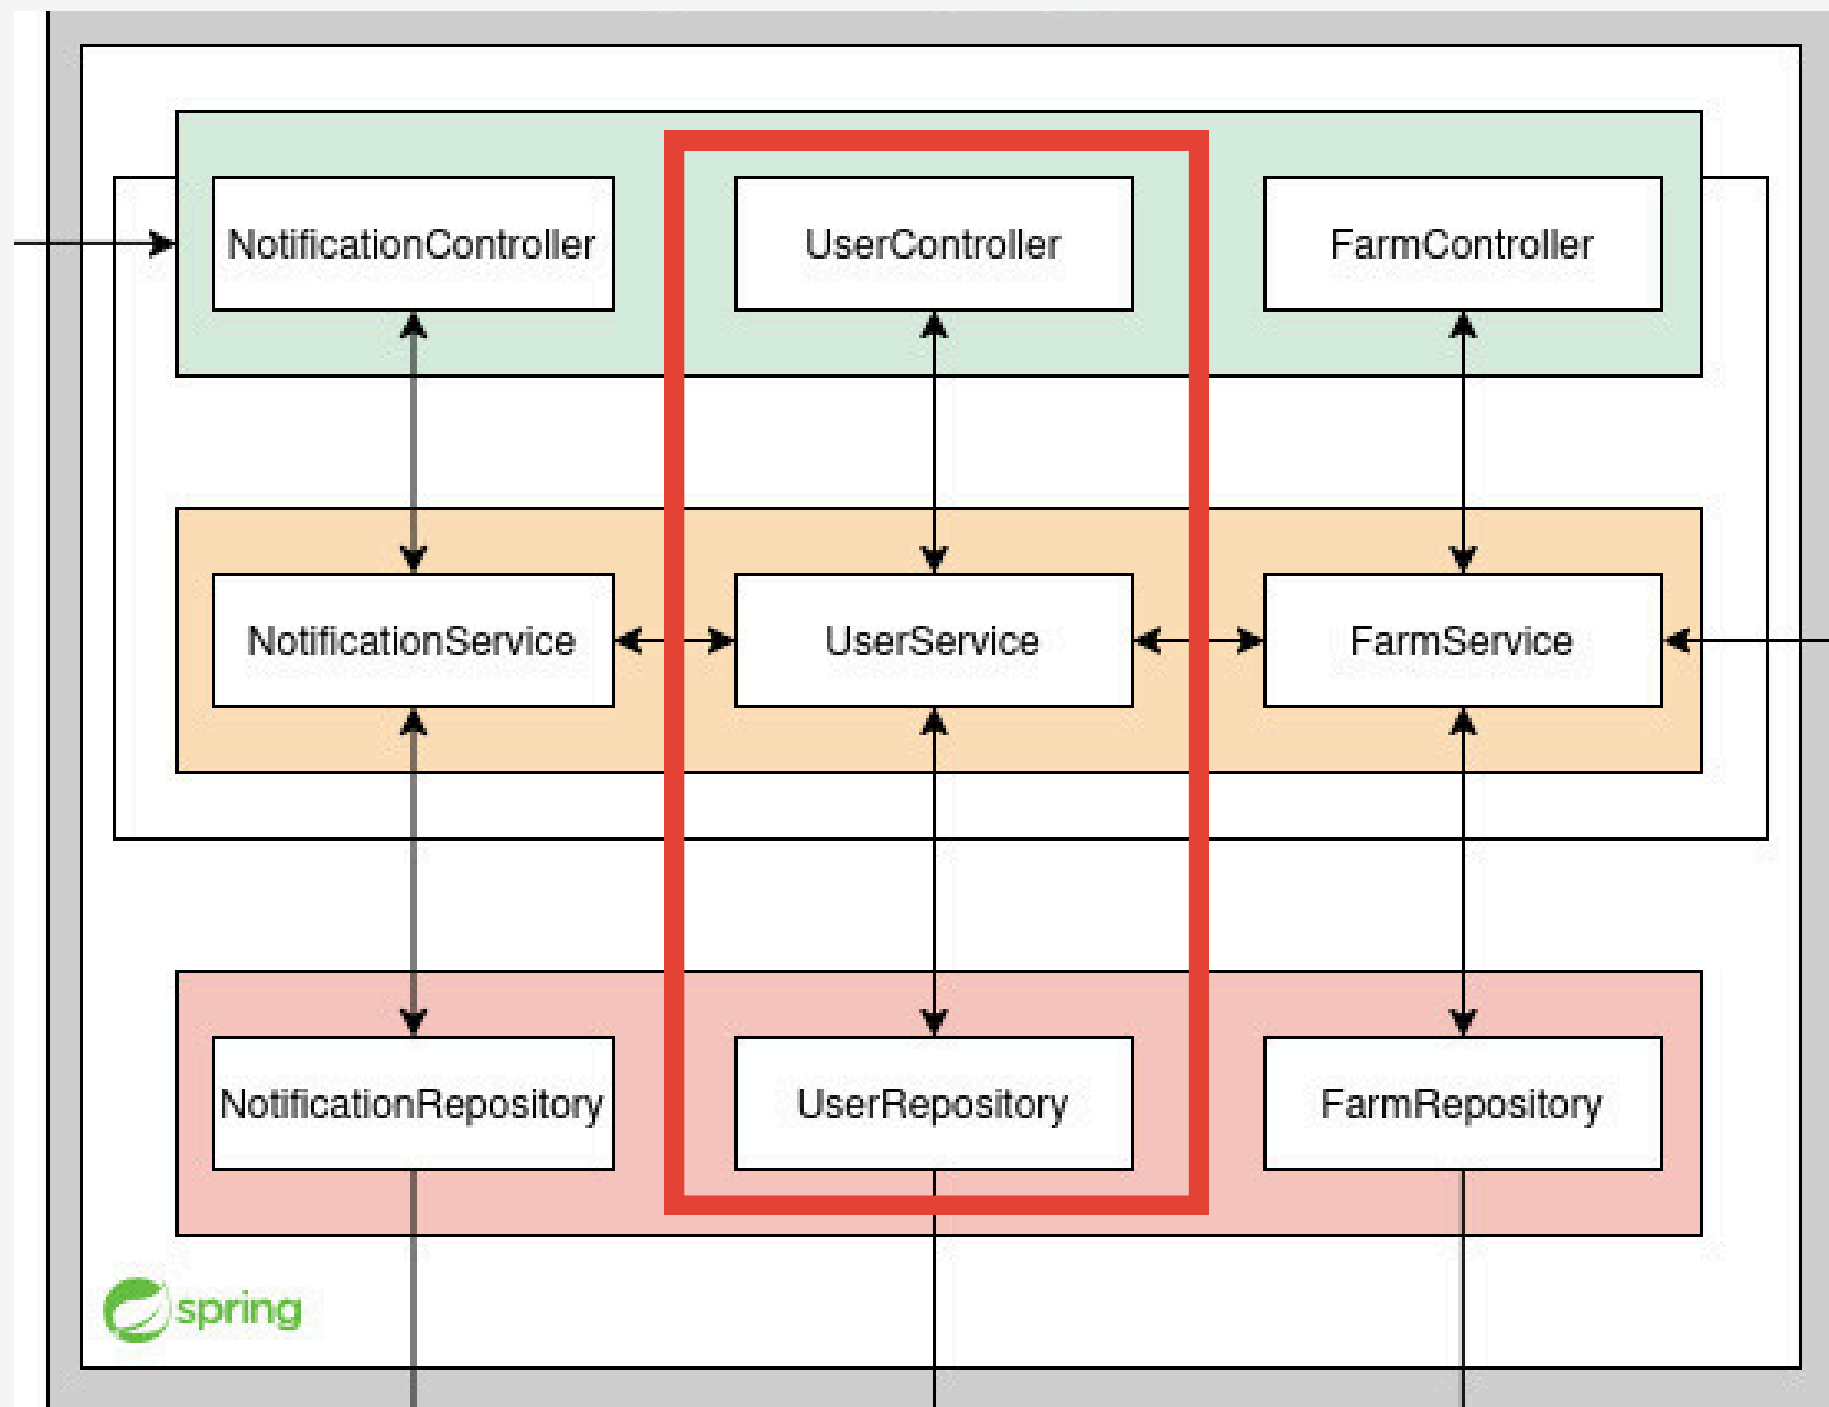

AgriSense

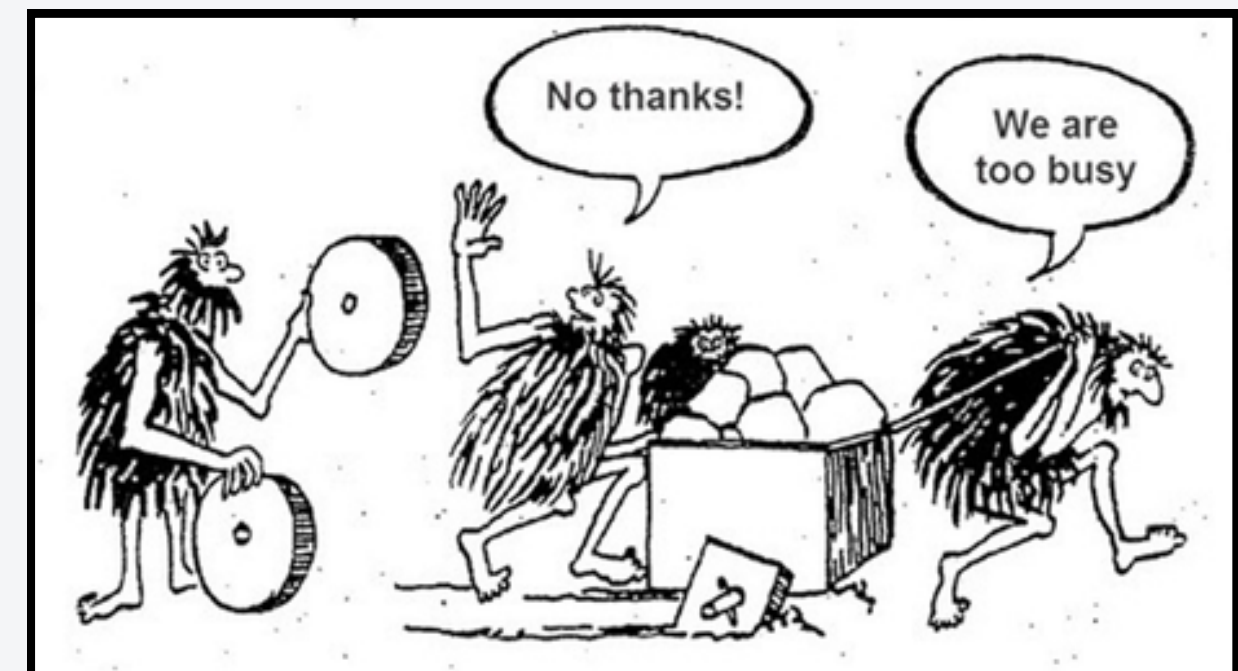

Architecture (Refactor)

Architecture (Refactor)

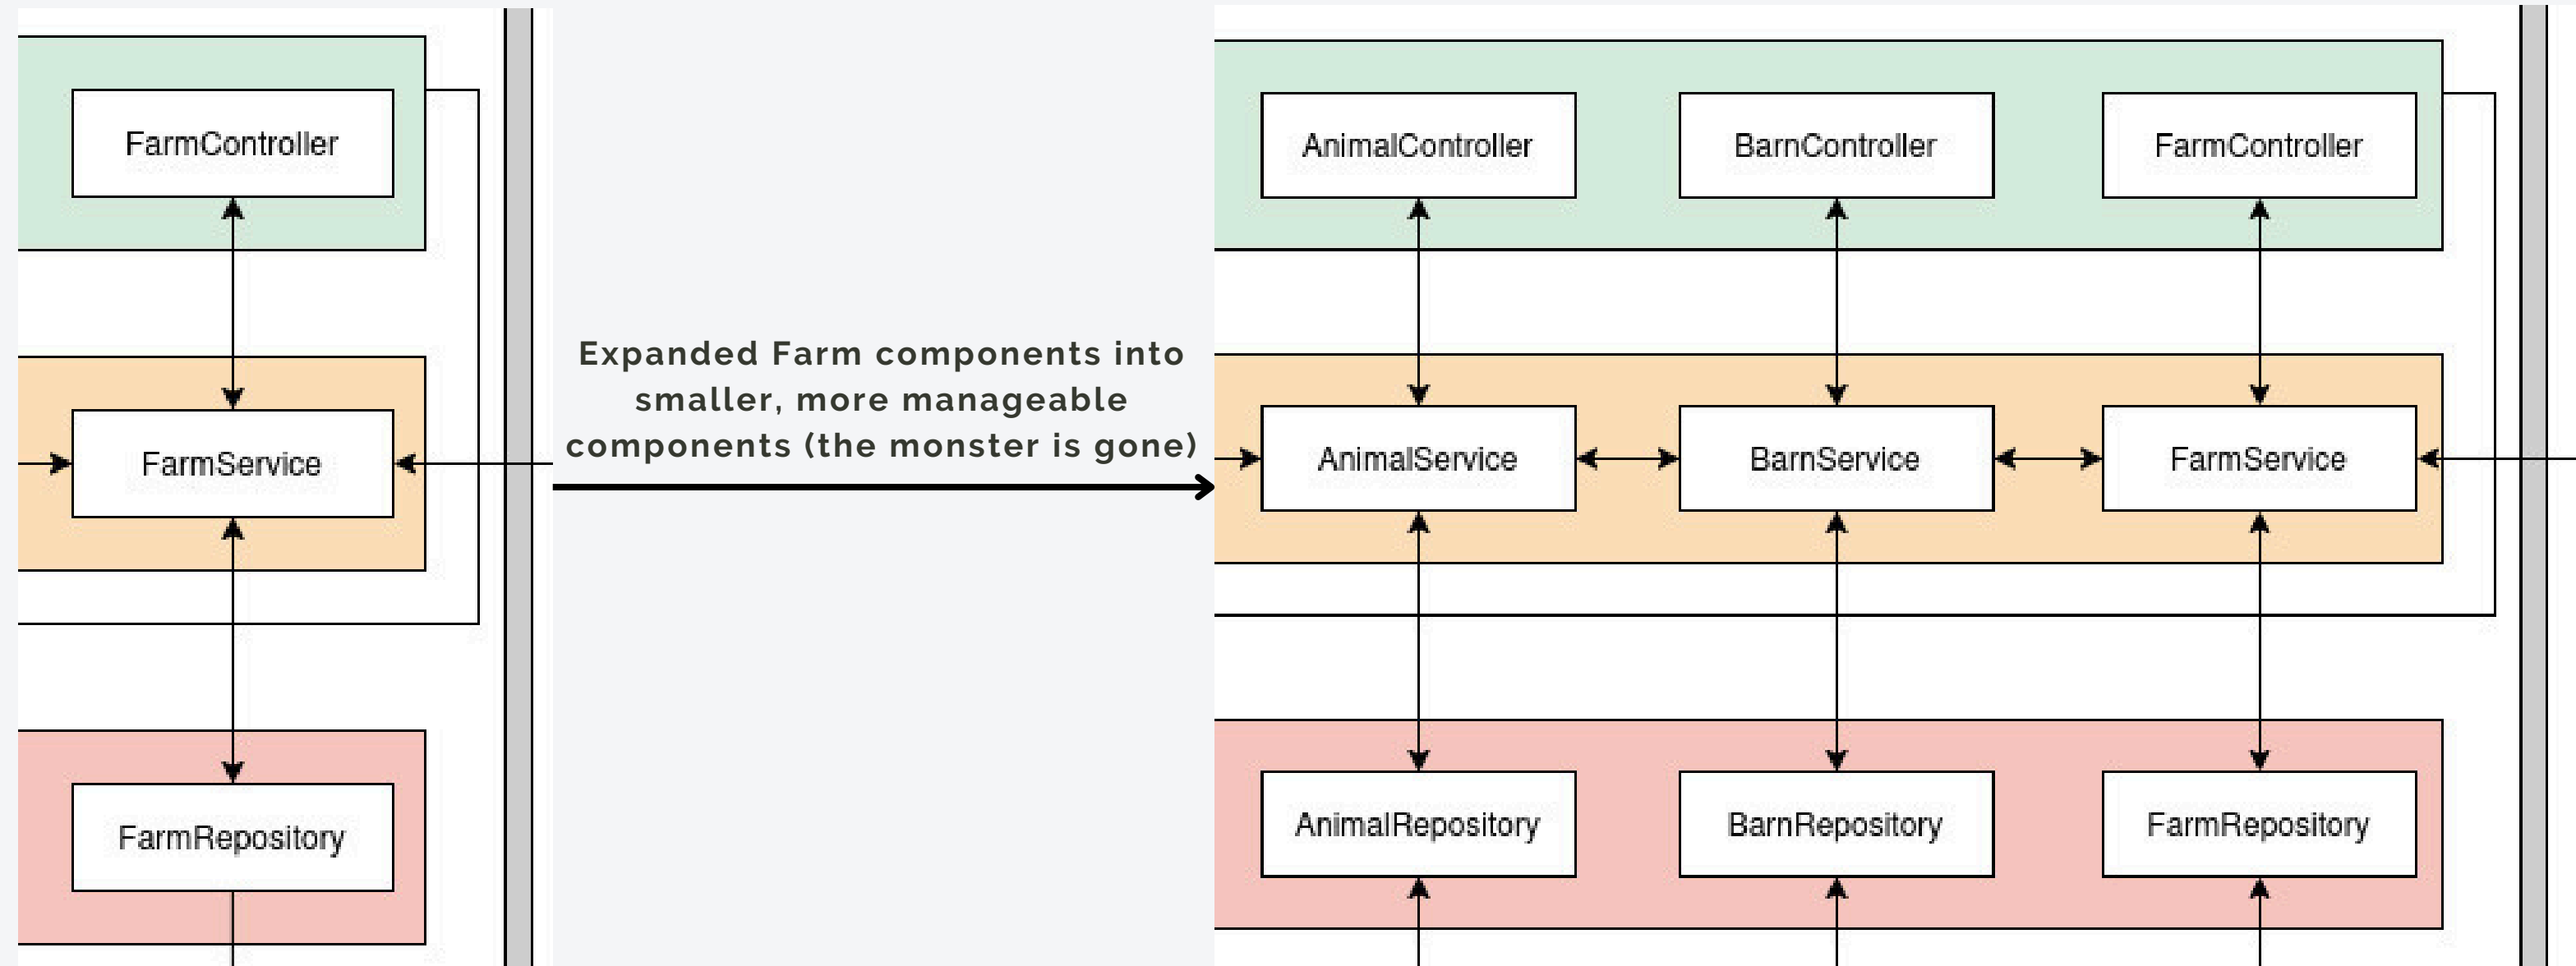

Removed User related components (Controller, Service and Repository) since that is managed by KeyCloak already (no need to reinvent the wheel)

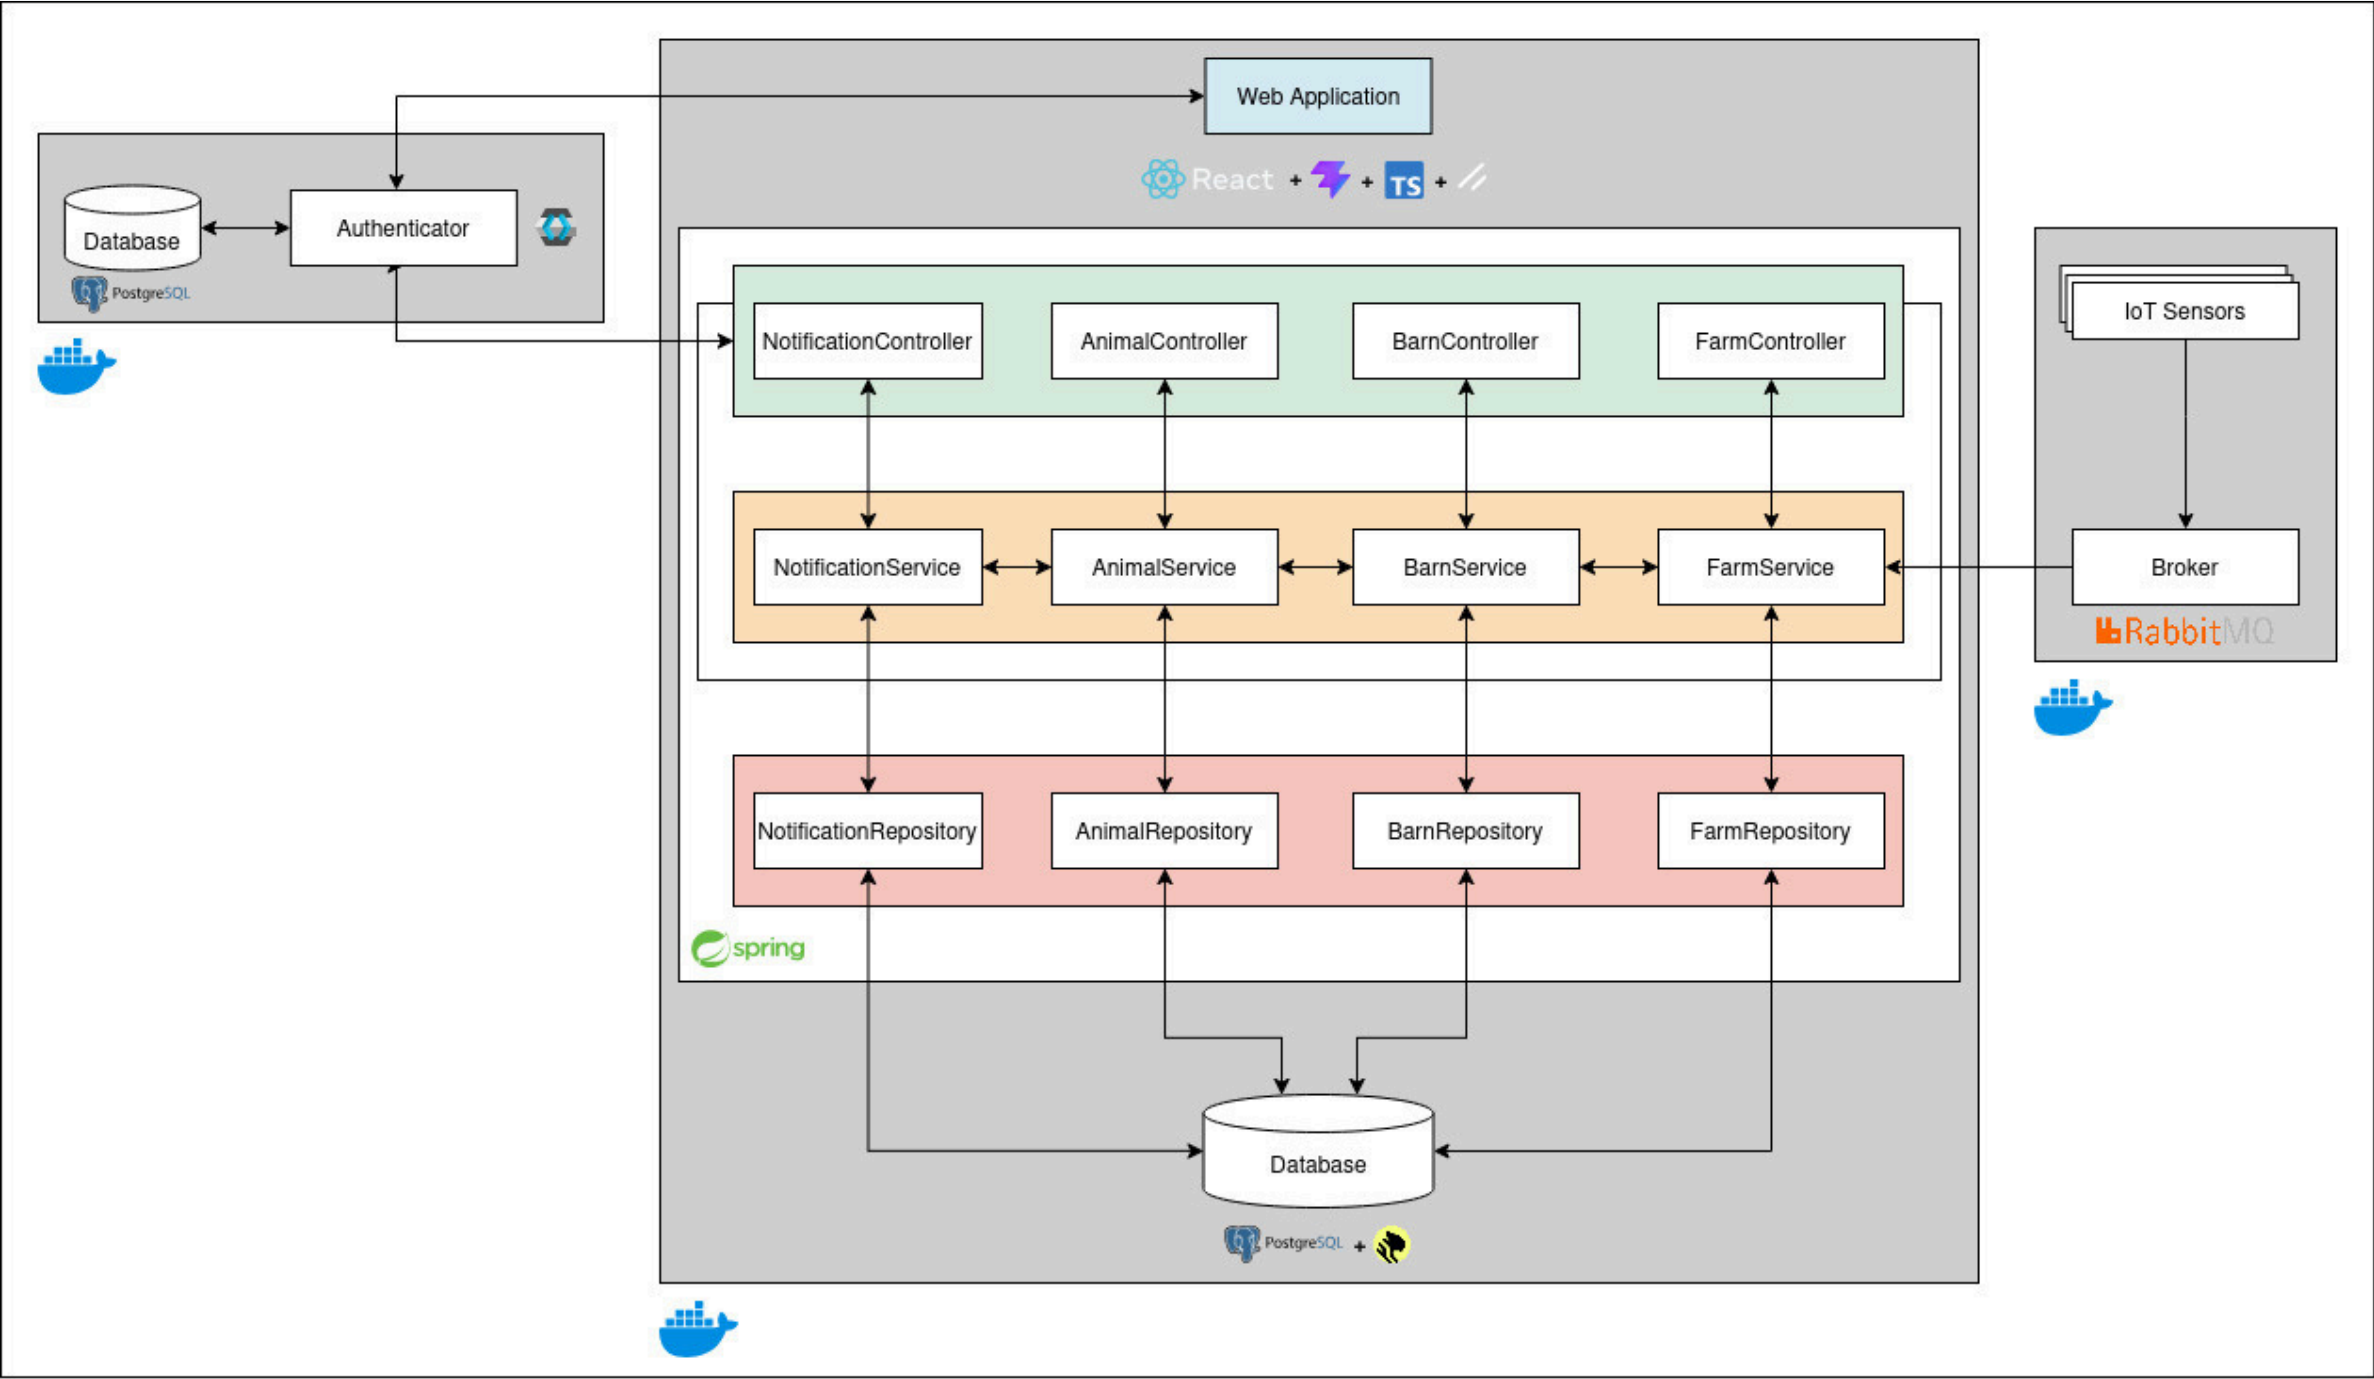

AgriSense

Architecture (Refactor)

AgriSense

Swagger

Animals		CRUD operations for animals	^
POST	/api/animals		▼
GET	/api/animals/{id}/weight	Get animal weight	▼
GET	/api/animals/{id}/movement	Get animal movement	▼
GET	/api/animals/{id}/metrics/latest	Get latest metrics	▼
GET	/api/animals/barn/{barnId}	Get barn	▼
DELETE	/api/animals/{id}	Delete animal	▼

Swagger

Farms CRUD operations for farms			^
PUT	/api/farms/{id}	Update farm	▼
POST	/api/farms		▼
GET	/api/farms/farmer/{farmerId}	Get farmer's farms	▼

AgriSense

Swagger

Barns CRUD operations for barns			^
GET	/api/barns/{id}	Get barn by ID	▼
PUT	/api/barns/{id}	Update a barn	▼
DELETE	/api/barns/{id}	Delete a barn	▼
GET	/api/barns	Get all barns	▼
POST	/api/barns	Create a barn	▼

AgriSense

Swagger

Manager		CRUD operations for manager	^
PUT	/api/manager/farmers/{id}	Update a farmer	▼
DELETE	/api/manager/farmers/{id}	Delete a farmer	▼
GET	/api/manager/farmers	Get farmers list	▼
POST	/api/manager/farmers	Create farmer	▼
